Client: Rutgers Cancer Institute of New Jersey, Jack & Sheryl Morris Cancer Center
A+D Firm: HOK Philadelphia / Glazier: ASSA ABLOY / Muraflex / R.A. Kennedy

Project Challenge: The Jack & Sheryl Morris Cancer Center in New Brunswick, New Jersey is the state's first and only freestanding cancer hospital: a 12-story, 520,000-square-foot facility housing inpatient and outpatient cancer care, research labs, and patient wellness services under one roof.

Skyline was engaged to create glass decorated to solve for patient privacy and visibility across enclosed infusion bays, exam rooms, and stem cell research labs, while also creating clear wayfinding and positive distraction within pediatric infusion and oncology spaces.

20,000 ft2 of decorative glass and 10,000 ft2 of Smart Glass later, the Rutgers Cancer Center is a beautiful example of the efficacy and elegance of decorative glass in healthcare.

Skyline's Solution

To support both patient experience and clinical performance, Skyline integrated SDX2 Smart Glass in patient observation windows and door systems. The glass switches instantly from clear to opaque, providing on-demand privacy without blinds or curtains while supporting a cleaner, easier-to-maintain healthcare environment.

Custom decorative glass installations add visual interest throughout lobby and treatment spaces, helping create a calmer, more welcoming atmosphere. Together, the smart and decorative glass contribute to the center's wellness focused design, reducing the institutional feel of the environment while supporting patient comfort.

Result:

Skyline's glass solutions help balance privacy, visibility, and healing throughout the facility. Smart Glass gives caregivers flexible sight lines while allowing immediate control over privacy, and decorative glass introduces durable and cleanable moments of beauty and positive distraction throughout the cancer care journey.

The result is a healthcare environment where technology, design, and patient well-being work together to support exceptional care.
